

- Chooch Al is a Computer Vision company based in Silicon Valley
- Post Series A , >\$20M raised, >\$5M in revenue, Series B CY 22
- Ready-now technology generates Contextual Perceptions of the visual environment; patented technology
- Complete Al Lifecycle Platform: Dataset Generation, Model Training, & Inferencing
- Mid-Stream Tech: Agnostic to Source Data and Endpoint
- Dual use technology spanning surveillance, geospatial analysis, critical infrastructure monitoring to healthcare, industrial safety, and manufacturing applications
- Optimized for NVIDIA GPUs and Intel CPUs (I7+), Linux OS (RedHat, Ubuntu)

Apply computer vision to generate intelligent image and video analytics in the Cloud or at the Edge

- Detect, recognize, locate, and report all objects, persons, and actions of interest in static images and full-motion video
- Automate human processes and reduce cognitive loads
- Eliminate 3rd party dependencies throughout the Al Lifecycle
- Ease of Use: No-Code UI is Designed for Non -technical End -User
- Clone human subject matter expertise directly into the system
- Enable machine-to-machine tasking and provide autonomous notifications improving Speed and Efficacy for Human -on-the -Loop decisions

Computer Vision Lifecycle

- Image & Video Annotation
- Bounding Box or Polygonal
- Smart Annotation
- Synthetic Data Generation
- Data Augmentation

Dataset Generation

Model Training

- Dense Classification
- No-Code Model Training
- Generated F1Score
- Model Import and Export
- Testing w/Feedback

Call to Action

Inferencing

- Alerts & Notifications
- Machine to Machine Tasking
- Edge Device Management
- Forensics Search Tool
- Heatmap

- Scalable Inference Engine
- JSON Format Output
- Annotated Image
- Rules Engine and Zones
